

Improve your Materials Management Process

Odette Global MMOG/LE Training Course

Improve the accuracy and efficiency of your materials management process whilst reducing costs from errors and waste.

As the global standard for the automotive industry, the MMOG/LE provides a common set of business procedures for the materials management function. OEMs and suppliers use the Global MMOG/LE principles to save time and costs, whilst ensuring effective and efficient management of materials. Implementation of this standard has produced significant benefits for many companies, including up to:

- 85 percent reduction in premium freight.
- 80 percent reduction in obsolescence costs.
- 40 percent reduction in inventory carrying costs.
- 20 percent reduction in data entry time.

Based on the joint Odette/AIAG standard *Global Materials Management Operations Guideline/Logistics Evaluation*, this course will allow you to explore opportunities on how this user-friendly guideline can be used for a best-in-class materials management process.

Using the MMOG/LE as a Continuous Improvement Tool training will help you to meet your customer requirements with ease and teach you how to proactively review your materials practices, ensure compliance to the industry standards and obtain the support needed for a first-rate materials management system.

This course will benefit anyone involved with materials or manufacturing operations, responsible for pulling together a team to drive improvement or in need of in-depth knowledge of the materials management operating guideline.

Coursework covers:

- The requirements for completing an MMOG/LE self-assessment
- A gap analysis with identification of action items
- Communication strategies for MMOG/LE throughout your organisation
- MMOG/LE implementation planning guidance
- Ideas about motivating change and dealing with resistance
